SUMMARY

B.Tech Information Technology student with strong hands-on experience in Python, data analysis, and AI-driven workflows using LangChain and n8n. Built real-world projects involving data preprocessing, exploratory data analysis, and predictive modeling, demonstrating analytical thinking and problem-solving ability. Experienced in designing automation pipelines, debugging complex systems, and working with structured datasets. Combines software engineering fundamentals with practical AI implementation to build efficient solutions. Eager to contribute to AI-driven product development and continuously learn in a fast-paced environment.

TECHNICAL SKILLS

Programming: Python, C, C++, Java, JavaScript

AI & Data: Data Analysis, Data Cleaning, EDA, Machine Learning Basics, Pandas, Matplotlib, Prompt Engineering, LLM Integration

Tools & Technologies: LangChain, n8n, Git, GitHub, SQL, Socket Programming, TCP/IP

Core Strengths: Problem Solving, Debugging, System Design Thinking, Rapid Prototyping

PROJECTS

Pokémon Data Analysis & Prediction Model | Python

[GitHub](#)

- Cleaned and preprocessed 700+ records using Pandas and performed exploratory data analysis to identify patterns
- Built a classification model achieving 78% accuracy and evaluated performance using validation techniques
- Derived data-driven insights to understand relationships between features and performance outcomes

AI Workflow Automation | LangChain, n8n

- Designed and implemented AI-driven workflows to automate query processing and response generation
- Built structured pipelines integrating LLM tools to improve efficiency and reduce manual intervention
- Applied logical flow design and debugging to ensure consistent and reliable outputs

Real-Time Multi-Client Chat Server | C

[GitHub](#)

- Developed a concurrent server supporting multiple clients using socket programming and threading
- Implemented real-time communication, synchronization, and error handling mechanisms
- Strengthened understanding of scalable systems and network-based architectures

AI Game Jam Finalist | Jabali

[Game Link](#)

- Ranked as Finalist in an AI-driven game jam, recognized for creativity and technical execution
- Built a playable game under strict time constraints using AI-assisted tools and rapid prototyping techniques
- Applied debugging, iteration, and problem-solving to deliver a functional gameplay system

Among The Ants | Godot, GDScript

[GitHub](#)

- Developed a 2D platformer implementing player movement, collision systems, and UI workflows
- Designed structured gameplay logic demonstrating event handling and state management
- Optimized performance through debugging and iterative improvements

EXPERIENCE

Core Team Member – AI/ML | GDG JIIT

Sep 2025–Present

- Built AI workflow automation pipelines using n8n for real-world use cases
- Designed structured systems for efficient query handling and response generation
- Conducted workshops for 30+ students, improving adoption of AI tools and automation workflows

Public Relations Team Member | CICR, JIIT

Sep 2025–Present

- Designed promotional content and contributed to event outreach strategies

EDUCATION

B.Tech in Information Technology

Jaypee Institute of Information Technology

CGPA: 8.2/10

2024–2028

CERTIFICATIONS

Microsoft Learn Introduction to AI in Azure — 2026

Oracle AI Foundations — 2025

NVIDIA LLM Prompt Engineering — 2025

Prompt Design in Vertex AI Skill - 2025
